Allowable Subject Matter

1. After a further search and a thorough examination of the present application and in light of the prior art made of record, claims 1-13 are found to be in condition for allowance.

Reasons for Allowance

The following is an Examiner's statement of reasons for the indication of allowable subject matter:

The claims are allowable over the prior art of record since the cited reference taken individually or in combination fails to particularly disclose a method for temporal interpolation of video frames within a source video sequence comprising the steps of reading two adjacent video frames of the video source sequence, detecting and removing frame defects, broadening a video frame beyond its original border, whereby an interpolation of a new video frame is enabled, splitting the video frame into a plurality of blocks, determining a displacement vector for each block, providing a means of automatic adjustment of system parameters for a given source video sequence, providing a means for motion estimation between the video frames, providing a means of detection of scene change within the source video sequence, selecting among at least one type of interpolation means based on the motion estimation, interpolating and inserting at least one new video frame into the source video sequence, providing a means of evaluating the quality of a new video sequence following interpolation, and

reiterating the steps of motion estimation and detection of scene changes until satisfactory quality is achieved.

The closest prior art (Martins et al. US Patent no. 6438275)) discloses a similar method for temporal interpolation of video frames. However, Martins fails to particularly teach or suggest *“providing a means of automatic adjustment of system parameters for a given source video sequence, providing a means for motion estimation between the video frames, providing a means of detection of scene change within the source video sequence, selecting among at least one type of interpolation means based on the motion estimation, interpolating and inserting at least one new video frame into the source video sequence, providing a means of evaluating the quality of a new video sequence following interpolation, and reiterating the steps of motion estimation and detection of scene changes until satisfactory quality is achieved.”* as claimed.

Conclusion

2. Any comments considered necessary by applicant must be submitted no later than the payment of issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submission should be clearly labeled “Comments on Statement of Reasons for Allowance”.
